

An ontology for ICPC-3 ?

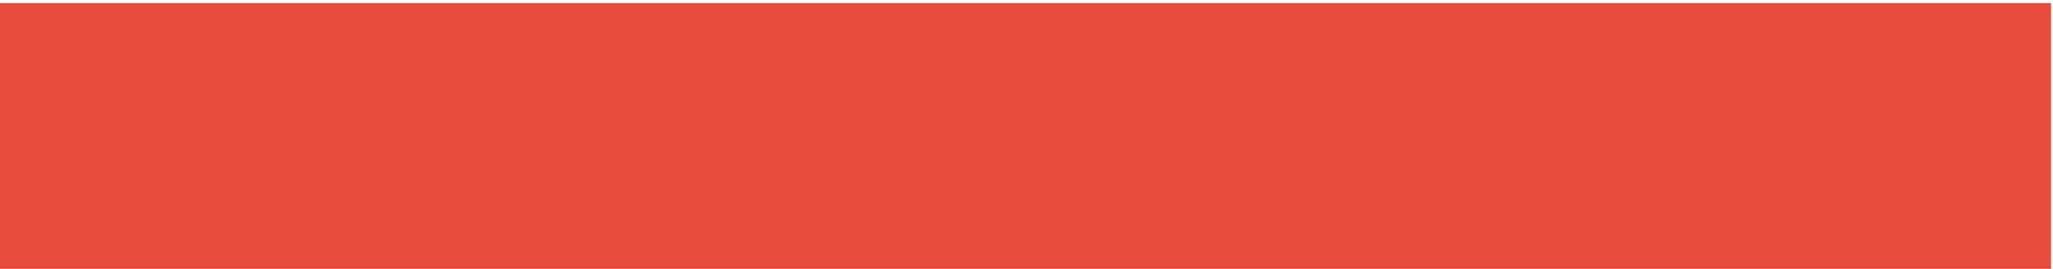

Benjamin Fauquert

GP, Brussels, Belgium
Université libre de Bruxelles

My interests :

- Decision support : [EBM practice net.be](http://EBM_practice_net.be)
- Multidisciplinary EHR : Pricare.be
- Public health, data collection : maisonmedicale.org
- ICPC
- Snomed-CT

- 
1. Some lacks in interface terminology
 2. The example of Snomed-CT
 3. Building blocks needed for an EHR
 4. Existing material for creating primary care and ICPC rules
- 

Some lacks in interface terminology

Thesauri/ vocabularies are present (belgian thesaurus, local thesaurus...) and somehow used.

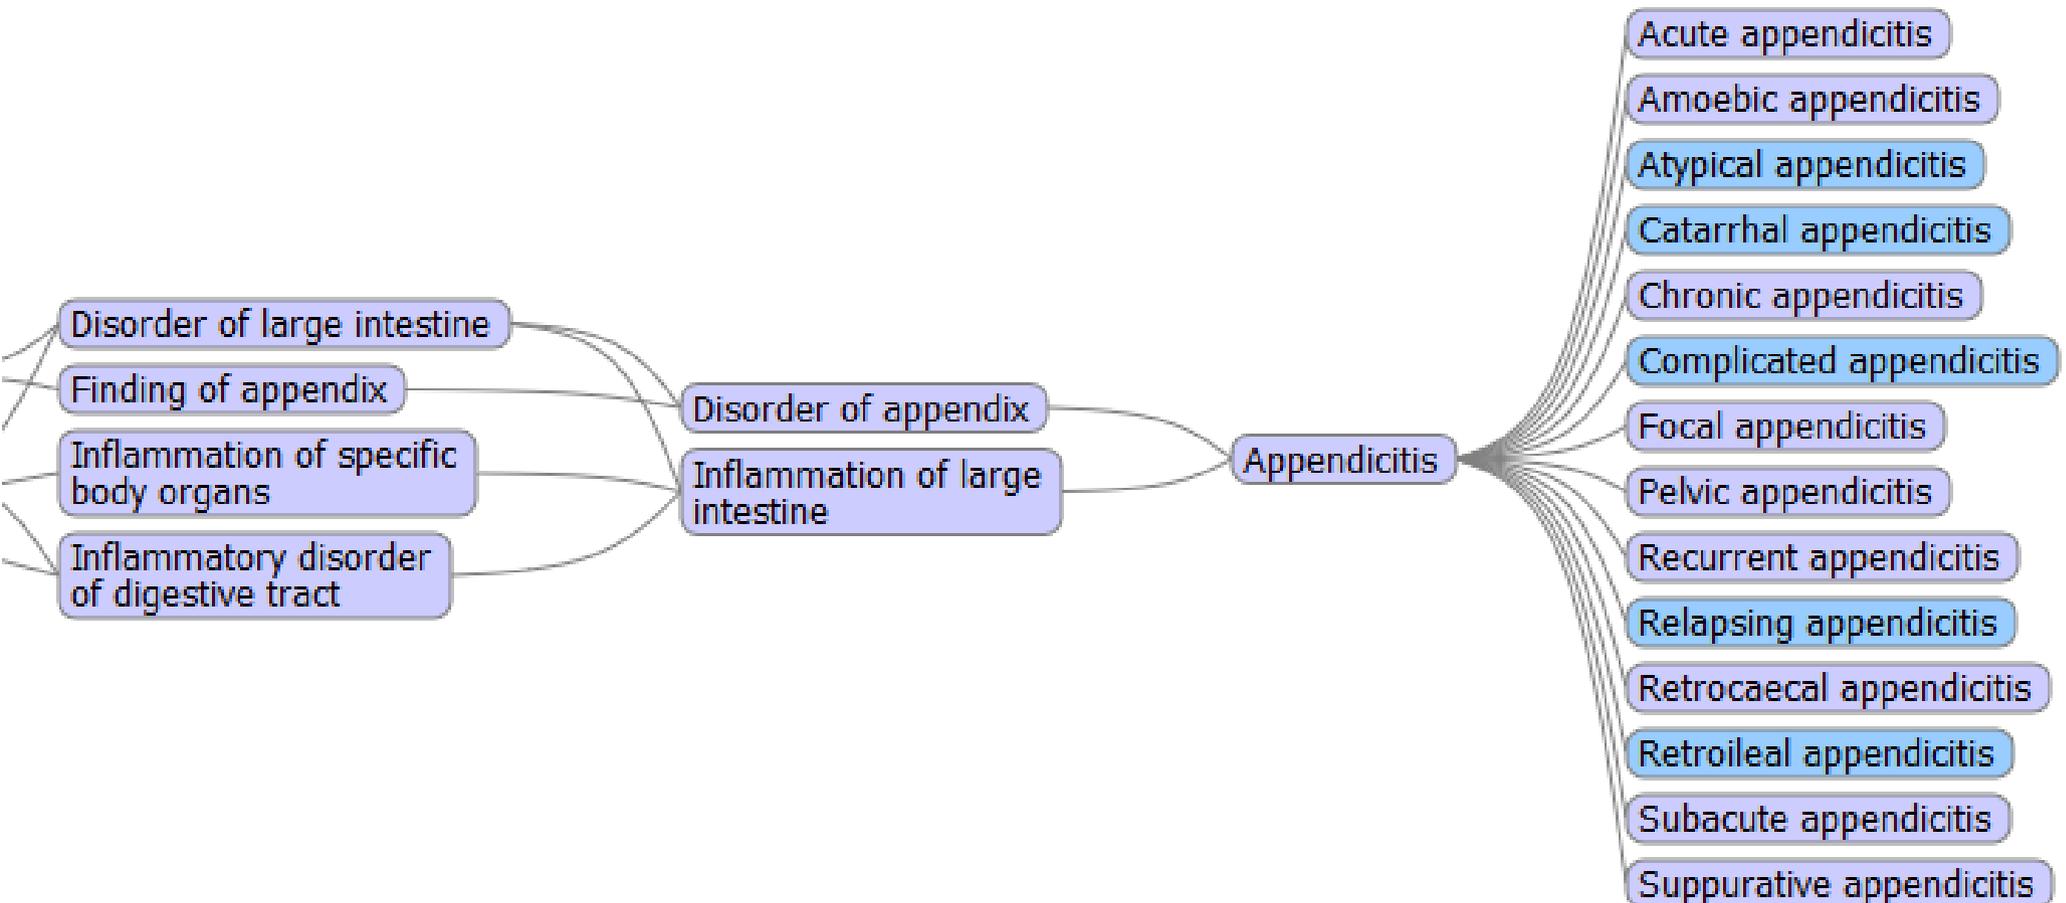

BUT, *no tools* to maintain them (no terminology server), to analyse there utilization, to update them, lack of informatic skills to implement them... just tireness to work on 50.000 lines Excel sheet !

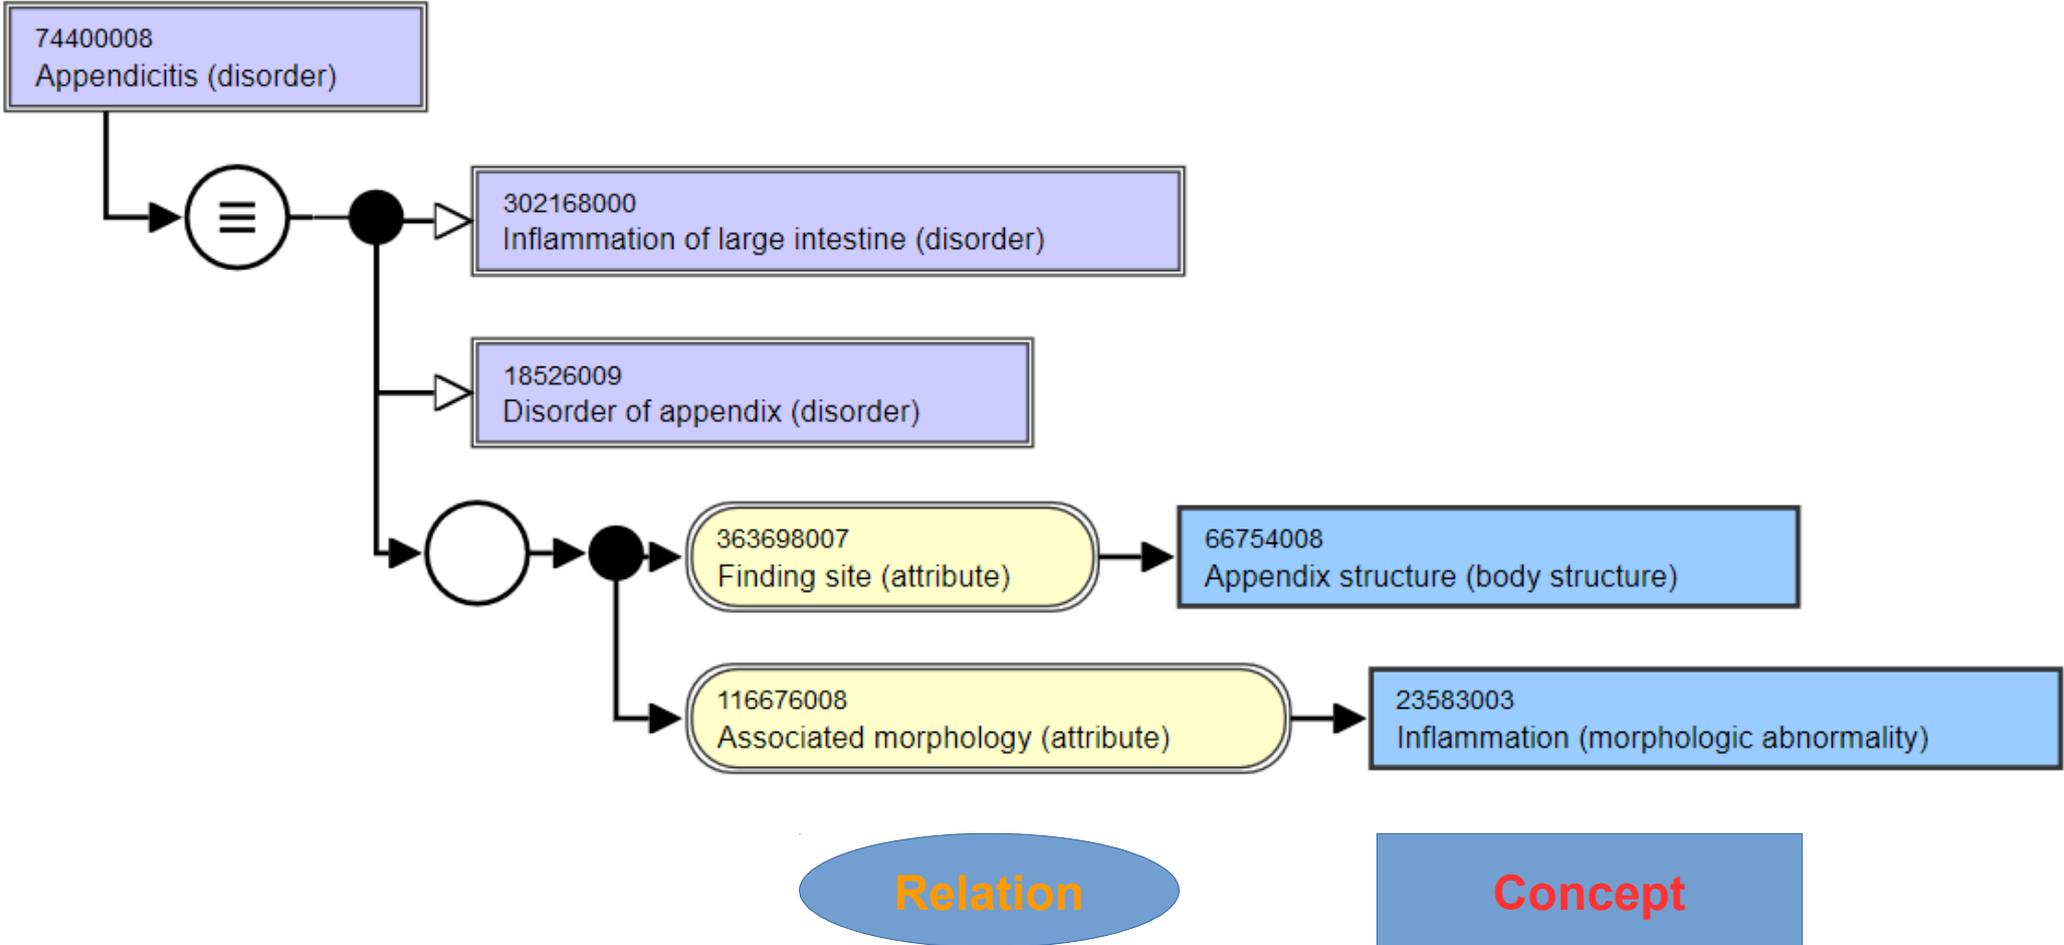

Today the structure of these thesauri are *outdated* comparing to new technical database standards : **medical knowledge evolve but IT technology also ! → knowledge management**

The example of snomed-CT

74400008 Appendicitis (disorder) Parents : 2 Enfants : 14				
Classe	Relation	Extra	Nom	
cisp2e		- INT	Appendicite	D88
snomed	is a	->	Disorder of appendix (disorder)	18526009
snomed	is a	->	Inflammation of large intestine (disorder)	302168000
snomed	associated morphology	->	Inflammation (morphologic abnormality)	23583003
snomed	finding site	->	Appendix structure (body structure)	66754008
snomed	is a	<-	Atypical appendicitis (disorder)	5596004
snomed	is a	<-	Recurrent appendicitis (disorder)	67365005
snomed	is a	<-	Relapsing appendicitis (disorder)	6503008
snomed	is a	<-	Chronic appendicitis (disorder)	58997001

MEDICAL REPORT ON IBRAHIM BIN TARALIN
SJ 1842706

The above mentioned was seen on the 16/5/2009. He gave a history of being assaulted by a suspect during an arrest process. He was pushed on the right shoulder from the front by the driver of a car who was attempting to drive off. This resulted in the side of the car brushing against the outside of his knee. The driver reversed and hit the same knee again.

On examination, he was well, alert and rational. Vital parameters stable. Mild tenderness noted over the right shoulder. No obvious swelling or bruise seen. Range of motion was full. Tenderness also noted over the lateral aspect of the right knee. Gait was normal.

X-ray of the knee was normal.

Diagnosis : right knee contusion.

He was discharged without medication and medical leave issued from 16/5/2009 till 18/5/2009.

DR LOOI CHONG HENG PETER
SENIOR RESIDENT MEDICAL OFFICER
Department of Emergency Medicine

This medical report is put up based on the findings documented by the attending doctor, Dr Fung Chak Yuen.

Attributes

Snomed-CT support

Refsets files

Updates every 6 months

Extensive documentation

- **Technical implementation guide**
- Editorial guide
- Learning modules, starter guide

MRCM : machine readable concept model

Browsers, API, MRCM file ...

Drawbacks of Snomed

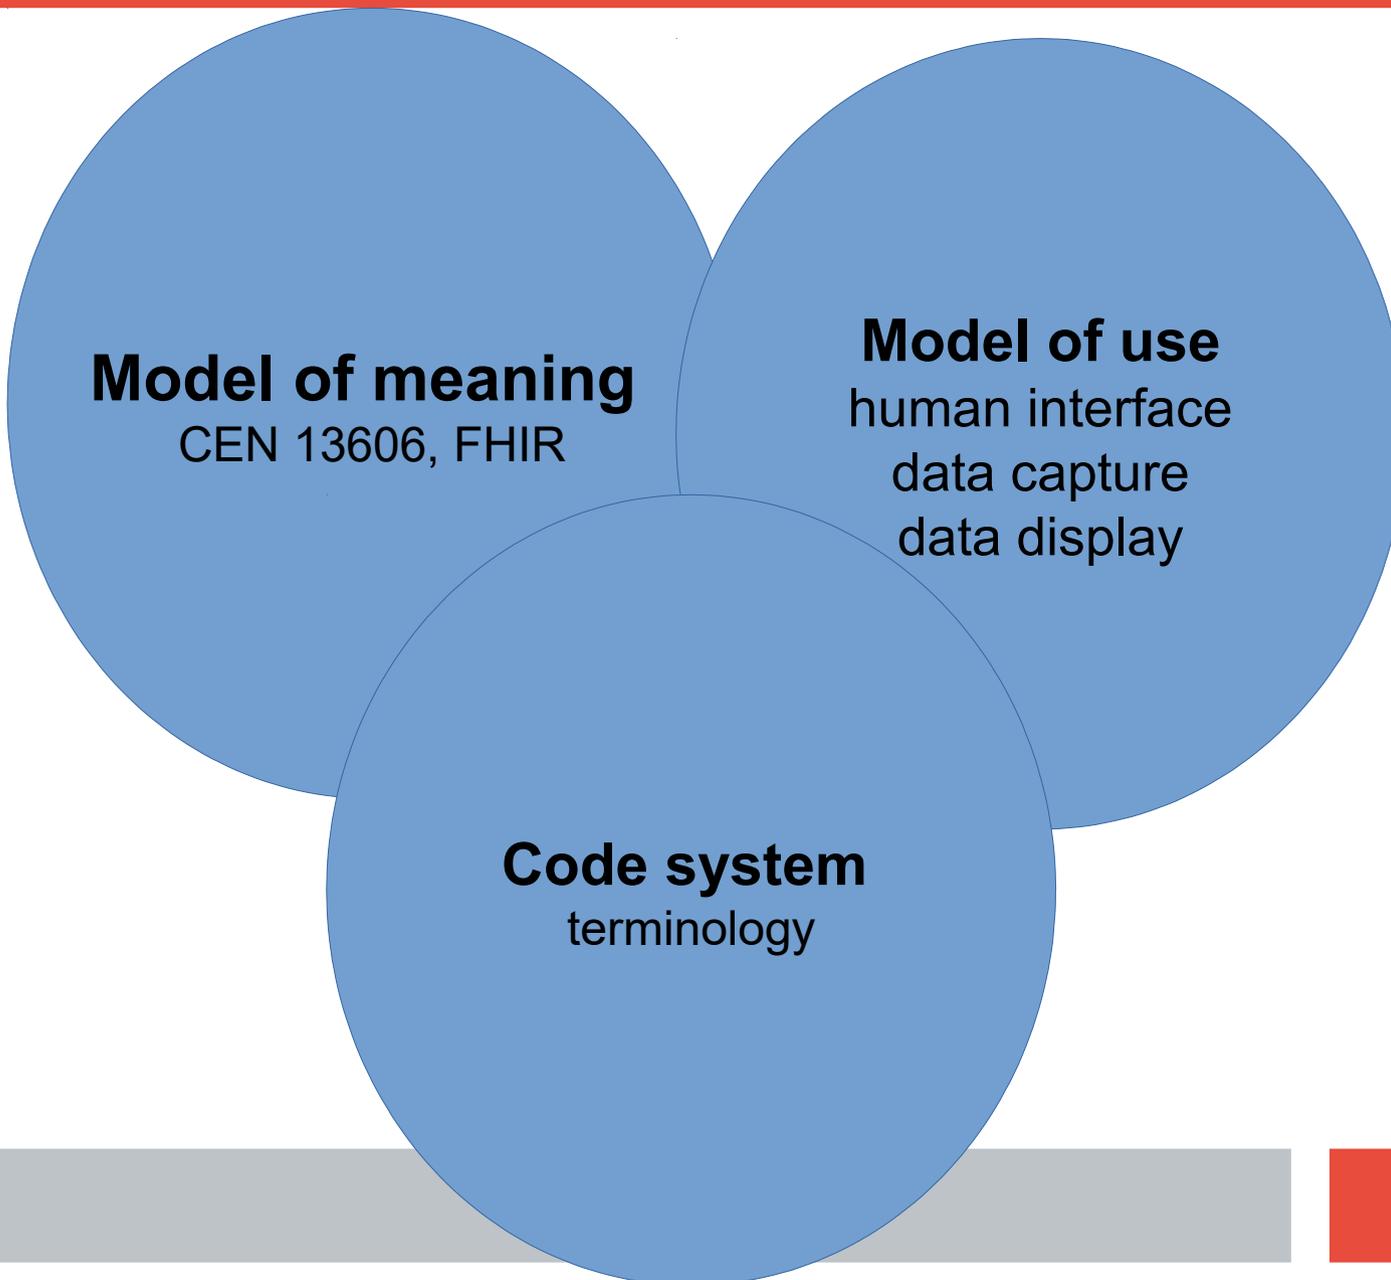

Ambiguity, redondance

Lack of primary care concepts (symptoms, procedures, social...)

Failure to manage langages in a standardized way

...

Buildings blocks of knowledge management

Material for primary care concept model ?

Primary care concepts are mainly consistent with ICPC principles : many still rules exists !

- **Episode of care definition, problem list definition**
- **Relations with the SOAP**
- **RFE : has to be choose in every component**
- **Other things not expressed in component or sub-component**
 - Risk factor
 - Severity (uncomplicated, complicated, severity stage)
 - Fonctionnality
 - Certainty
 - Chronic disease
 - Inclusion, exclusions, consider
 - Cross chapter issues

Material for primary care concept model ?

- Relations to the other terminologies (ICD, ICF, ICHI, LOINC, SNOMED...)
-
- Relations between translations of ICPC → set of files

Focus of ICPC ?

Epidemiology only

Doing everything

Epidemiology mainly coded in daily practice → connected to daily professional process

ICPC is still used in many places for other purpose because of the relevance of its categories for clinicians also as an opener of other terminologies

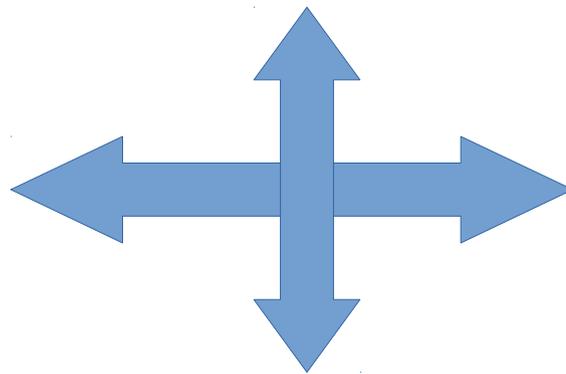

Interoperability of ICPC ?

- With interface terminology (model of use)
- With clinical decision support
- For (academic) education purpose : continuous learning systems
- With hospital systems – continuity of care
- Access to patient information

Hacking ICPC !

Epidemiology only

Doing everything

Would you hack ICPC-3 to
ontologize it ?
